

Service Level Agreement for open eir¹ ADSL Bitstream Service

¹ open eir is a trading name of eircom limited, Registered as a Branch in Ireland Number 907674, Incorporated in Jersey Number 116389, Branch Address : 1 Heuston South Quarter, St. John's Road, Dublin 8

Version Control

Version	Status	Update	Effective Date
4.0		Rebranded	October 2015
V5.0	Final	This document is based on V4.0 Implementation of Standardised Change Control.	13/06/2017

This document follows change control procedure:

Proposed is defined as a document status when the approved document is uploaded to Proposals Section of open eir Website.

Final is defined as a document status when the approved document is uploaded to the relevant section of the open eir Website following the publication period.

For information:

- Historical Document History Table located at end of Document.
- Publish means the action of uploading a document to the website regardless of status or location.
- **If there are changes to the document between 'Proposed' and 'Final', change control operates.**

This Service Level Agreement (SLA) is effective from 15/07/2013 and shall remain in effect until amended by eir.

1. This document details the service levels to which eir commits with regard to the service delivery and service assurance of eir's **ADSL Bitstream Service**. **The services are at all times provided subject to the terms and conditions as set out in the Standard Agreement for the Provision of the ADSL Bitstream Service ('Agreement')**.
2. The service levels offered are applicable to the service delivery and service assurance of **Bitstream Ports as defined in the ADSL Bitstream Service Product Description ('Product Description')** and ordered pursuant to the **Agreement being in place between eir and the Access Seeker ordering the services**.
3. The services described in the SLA are subject to the **ADSL Bitstream Service Industry Process Manual (IPM) ('Industry Process Manual')**, which defines the detailed operational processes associated with the provision and fault management of Bitstream Ports.
4. The definitions in Section 1 of the Agreement will apply unless explicitly stated otherwise.
5. The service provisioning and service assurance service levels set out in the SLA are applicable to the Bitstream Ports available at eir Bitstream enabled exchanges.
6. Faults covered by this SLA are defined as only those faults associated with or occurring from the Bitstream Ports to the Bitstream Service handover points in the eir ADSL Regional POP's **unless excluded as defined in Appendix 1**.

1 Service Delivery Process Definitions

Definitions associated with service delivery SLA parameters and process points relevant to this SLA are, unless indicated otherwise, as defined in the Agreement, Industry Process Manual and Bitstream Product Description.

Validation:

The date from which all lines of the order have been successfully validated, against eir customer database systems. The order status is altered from "Awaiting Validation" to "Awaiting Delivery" on the Unified Gateway on the validation date. The SLA clock will start following confirmation of the validation of a Bitstream Order as notified on the Gateway.

Appointment Date:

Appointment Date is the due date of delivery for a Bitstream Port as per the Industry Process Manual.

Completion:

A Bitstream order is deemed to be completed once eir successfully completes the order and when the order status alters from "provisioning started" to "completed" as advised on the Gateway. The SLA clock will stop following confirmation of the completion of an order to the Access Seeker as advised on the Gateway.

Bitstream Port:

Bitstream Port is the capability to provide a Bitstream Product to an in-service telephone number / CLI or a unique circuit reference number

Product:

A Product means singularly, each variant of the Bitstream Service set out in the Product Description, as may be updated and re-published from time to time.

2 Service Level Summary for Service Delivery

2.1 Terms and Conditions

eir commits to deliver 100% of Bitstream Port provide orders by their agreed Appointment Date following successful validation subject to the provisions set out in this SLA.

Bitstream Managed Backhaul

eir will publish monthly peak utilisation statistics from the eir NGN core network to demonstrate that the Bitstream Managed Backhaul product is an uncongested service.

3 Service Delivery – Non compliance

For every Working Day of delay in the provision of service against the Appointment Date, eir shall be liable to pay on a sliding scale a penalty for non-compliance for the provision of Bitstream Ports.

As a penalty, 50% of connection fee will be repaid on a linear basis over 'A Days'. After the period of 'A days' has elapsed, a penalty equivalent to x% of the payable rental per day is charged (where x is 100%), for non-delivery of service.

Table 1: Delivery Penalty - "A" Days Summary

Description	Standard Service Delivery	Days to be added to the Appointment Date to derive "A"
Bitstream Port Provide Orders	100% by Appointment Date following successful order Validation notification unless subject to conditions as defined in Appendix 1	5 Working Days

eir will be exempt from penalty payment if non delivery is subject to the conditions indicated in Appendix 1.

Figure 1: Non-compliance - Service Delivery

An outline to guidelines for payment of penalty credits is provided in Appendix 2.

4 Service Assurance Process Definitions

Definitions associated with service assurance SLA parameters and process points relevant to this SLA are, unless indicated otherwise, as defined in the Agreement, Industry Process Manual and Bitstream Product Description.

Working Hours:

Working hours for fault acceptance purposes is defined as a day other than a Saturday, Sunday, or Public Holiday between the hours of 9:00am and 5:00pm as per the WBARO

Repair Time:

Repair Time is the duration between the time a fault is accepted by eir in accordance with the fault reporting procedures and the time marked by eir as a **“Clear-Permanent”**.

On completion of repair, a fault ticket is given a “Clear-Temporary” status and that ticket is parked, i.e. the clock is stopped until the fault clear is either accepted by the customer or three working hours **from the “Clear-Temporary”** customer notification time has elapsed.

If the fault has either been accepted by the customer or three working-hours has elapsed **from “Clear-Temporary”** customer notification, the fault ticket is un-parked and given a **“Clear-Permanent”** status together with an associated final clear code and the fault ticket is permanently closed.

If the customer responds with a rejection of repair the ticket is un-parked, the clock is re-started and repair work recommences. On completion of **repair, the “Clear-Temporary”** status is applied again, customer is notified, the fault is parked and the process above is repeated.

Fault:

The POTS based Bitstream Service requires that the customer have a working PSTN line connected to the eir network before their Bitstream service can be provided. A POTS based **Bitstream fault, therefore, is a problem which prohibits a subscriber’s Bitstream service,** while the customer still has the ability to make or receive calls to or from eir’s **switched** network.

A Standalone Bitstream Managed Backhaul fault is defined as a problem in the eir network which prohibits an end-user's **Standalone Bitstream Managed Backhaul** service.

Out of Service:

Out of Service is the difference between the "Clear-Permanent" timestamp and fault report timestamp less non-business hours and parked time.

Measuring Service Availability

Propose removal of this section from 1st October 2015

Fault Resolution – effective 1st October 2015

Activity Description	Performance Metric	Performance Target	Service Credit for not meeting performance target
Resolution of a Bitstream Fault	Repair time: 2 working days	Target 77%	See article 1 appendix 3
Resolution of a Bitstream Fault	Repair time 5 working days	Target 92%	See article 2 appendix 3
Resolution of a Bitstream Fault	Repair time 10 working days	Target 100%	See article 2 appendix 3

An outline to guidelines for payment of penalty credits is provided in Appendix 4.

5 Service Level Summary for Service Assurance

eir commits to provide the following service levels for Bitstream Service Assurance subject to the provisions set out in this SLA:

- Fault Reception and Acceptance between the hours of 09:00 to 17:00 Monday to Friday excluding public holidays.
- 100% of Bitstream logged Fault reports will receive an initial fault response within 4 working hours of fault submission.
- Proactive fault statusing for all accepted Bitstream fault reports via Gateway.

The service levels set out above will apply unless affected by the conditions set out in Appendix 1

6 Pricing

The Bitstream Service Level Agreement is an in-tariff offer.

7 Reporting

eir will provide a report on the service assurance parameters, Service Delivery on a monthly basis and Service Availability on a quarterly basis to the relevant Access Seeker.

eir will publish Monthly utilisation statistics from the eir NGN core network to demonstrate that the Bitstream Managed Backhaul product is an uncongested service.

The reports will be produced and circulated within 30 calendar days in the month as appropriate.

The reports will provide a summary of actual parameter performance against quoted service assurance parameters.

8 Penalty Exemption

eir will be exempt from penalty payment in the event it is successful in delivering 90% of Bitstream Ports to an individual Access Seeker within the SLA timescales. eir performance will be assessed on a monthly basis to determine if the 90% threshold has been met.

Appendix 1: Exclusions

Penalty Exclusions - Service Delivery

The payment of penalties for Service Delivery performance is subject to the following conditions:

1. Delivery of POTS Bitstream Service is dependent on an existing in-Service PSTN line connected to the eir network.
2. Service delivery SLA commitments for Bitstream Ports based on connection types other than the defined service are not guaranteed. If an Access Seeker requests a non-standard Bitstream variant, the service delivery lead-time will not be bound by this SLA (e.g., ISDN migrations to Bitstream).

Penalty Exclusions - Service Assurance

The service levels set out in this SLA will not apply where the failure of the Bitstream Service to meet the performance targets results from:

1. Failure by the Access Seeker to adhere to any of the detailed provisions of the ADSL Bitstream Service Product Description, Industry Process Manual, Agreement, or SLA obligations.
2. A breach of any part of the Agreement by the Access Seeker.
3. The suspension of the Service under the provisions of the Agreement.
4. **A failure in the Access Seeker's Bitstream Connection Service.**
5. An Access Seeker failing to prove a fault out of their own network prior to raising a fault with eir.
6. **A fault related to the Subscriber's PSTN service.**

-
7. A fault occurring due to interference on the line caused as a result of an adjacent pair. Such instances will be addressed under the CLFMP.

Additionally, for the purpose of calculating penalty rebates, eir will exclude those faults where non-availability arises from, or is otherwise caused by, faults attributed to storm, lightning, flooding, damage by a third party, or vandalism.

Appendix 2 - Guidelines for Payment of Penalty Credits

1. eir shall provide Access Seekers with penalty statements one month in arrears in the month/quarter following as appropriate. The statement will be reconciled between the parties during month following the issuing of the penalty statement with payment made in the next billing cycle.
2. In the event that the Access Seeker is of the opinion that a penalty liability has been incorrectly calculated then a claim must be submitted in writing to:

The Penalty Manager

open eir

5th Floor

1 Heuston South Quarter

St. John's Road

Dublin 8

3. In case of a query, any supporting documentation must be supplied within ten Working Days of a request by eir.
4. Any adjustment will be remitted by way of credit against the account associated with the claim.

Appendix 3 - Parked Time

Circumstances whereby a fault cannot be progressed on behalf of an Access Seeker, and the fault is parked include the following:

- eir cannot get co-operation from the Access Seeker in progressing fault resolution according to the processes in the Industry Process Manual..
- **A fault ticket receives an “Clear – Temporary” status.**
- Proceeding with the fault would result in a health and safety risk, the avoidance of which could not have been realistically predicted by eir.
- It is requested by the Access Seeker and/or subscriber to park the fault.
- Force Majeure, as defined in the Agreement.

Appendix 4 – Repair Service Algorithm

Note: the below targets are effective from 1st September 2015

Target	Actual Performance	Service Credit
77% repair in 2 Working days	X% - Actual 2 day repair performance	€4.00
92% repair in 5 working days	X% - Actual 5 day repair performance	€7.00
100% repair in working 10 days	X% - Actual 10 day repair performance	€10.00

Faults repaired and applicable for the SLA payment for the Quarter are assembled to give “list 1”.

List 1 = all tickets assessed under SLA for that period

List 2 = all tickets closed after Day 2

List 3 = all tickets closed after Day 5

List 4 = all tickets closed after Day 10

List 5 = List 2 minus List 3 – all tickets closed on days 3 through 5

List 6 = List 3 minus List 4 – all tickets closed on days 6 through 10

$C(x)$ = count of tickets in a given list

$A(x)$ = average ticket days in a given list

$\Sigma(x)$ = cumulative ticket days in a given list

Article 1: 2 day repair service credit Calculation

Where this SLA is not met, the SLA penalty penalises Days 3 to 5 of all tickets in breach. The 77% target mitigates the commercial impact of this article.

Number of Faults subject to Penalty

Number of Faults subject to penalty = $C(2) - C(1) * (1 - 0.77)$

Multiplier

Penalty Days (multiplier) = $(\sum(5) - 2 * C(5) + 3C(6) + 3C(4)) / C(2)$ - Average penalty days of all tickets in breach, where tickets closed on or after Day 6 are deemed to have breached this SLA by the maximum 2 days.

Service Credit 1 = (Number of Faults subject to penalty) * (Multiplier) * Penalty

Article 2: 5 day repair Service Credit Calculation

Where this SLA is not met, the SLA penalty penalises Days 6 to 10 of all tickets in breach. The 92% target mitigates the commercial impact of this article.

Number of Faults subject to Penalty

Number of Faults subject to penalty = $C(3) - C(1) * (1 - 0.92)$

Multiplier

Penalty Days (multiplier) = $(\sum(6) - 5 * C(6) + 5 * C(4)) / C(3)$ - Average penalty days of all tickets in breach, where tickets closed on or after Day 11 are as having breached this SLA by the maximum 5 days.

Service Credit 2 = (Number of Faults subject to penalty) * (Multiplier) * Penalty

Article 3: 100 % Service Credit Calculation

Number of Faults subject to Penalty

Number of Faults subject to penalty $C(4)$ (Count of all tickets closed on or after day 11)

Multiplier

= $(\sum(4) - 10 * C(4)) / C(4)$

Service Credit 3 = (Number of Faults subject to penalty) * (Multiplier) * Penalty

Total Service Credit = Service Credit 1 + Service Credit 2 + Service Credit
