No part of this document, or any software included with it, may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, including photocopying, electronic, mechanical, recording or otherwise, except in accordance with written agreement with eircom Limited. The disclosure of its contents to any third party is strictly prohibited without the prior written consent of eircom Limited.

In September 2010 ComReg issued a consultation document on the Introduction of Key Performance Indicators for Regulated Markets. This consultation proposed the introduction of KPIs in four regulated markets:

- Retail Narrowband Access
- Wholesale Broadband Access
- Wholesale Physical Network Infrastructure Access, and
- Terminating Segments of Wholesale Leased Lines

Services are made available by alternative providers in all of these markets and many are based on wholesale elements supplied by eir.

In June 2011 ComReg issued Response to Consultation and Decision Notice (D05/11) directing eir to publish all of the proposed KPIs in a single place to enable explicit comparisons to be made between Wholesale outputs and the equivalent inputs provided to eir Retail.

This transparency provides an assurance to consumers that the products and related services used by both eir retail and open eir customers are of the same standard, and that no discrimination in respect of **eir's** wholesale services occurs.

# Products included in the KPI metrics -

## Retail Narrowband Access Market –

(i) SB-WLR (ii) WLA and (iii) eir's Retail PSTN & ISDN BRA products

## Wholesale Bitstream Access Market – Current Generation

(i) Wholesale Bitstream Services and (ii) eir Retail Broadband Services

## Wholesale Physical Network Infrastructure Access Market –

(i) Line Share and (ii) eir Retail Broadband Service

(iii) ULMP / GLUMP Services and (iv) eir Retail PSTN&ISDN Service and

## Wholesale Terminating Segment of Wholesale Leased Lines Market –

(i) Wholesale provided traditional Leased Lines / PPC EULs, and (ii) eir Retail provided traditional Leased Lines and

(iii) Wholesale provided NGN Ethernet Leased Lines / WSEA and (iv) eir Retail provided NGN Ethernet Leased Lines

## Wholesale Bitstream Access Market – Next Generation

(i) NGA FTTC POTs Based Services (ii) NGA FTTC Standalone and (iii) NGA FTTH

# Summary of KPI metrics -

The KPI metrics for each Market are split between Supply and Repair of Service

## Metrics associated with Supply of Services

% connections in x working days

Average connection time

Quality of supply (included for narrowband and broadband markets)

## Metrics associated with Repair of Services

% repairs in x working days

Average repair time

Quality of repair (included for narrowband and broadband markets)

## Comment on Table 1

### In-Situ/EE Connections

The PW transfer order has an inbuilt delay where the line configuration is done at 4am. Therefore if an order is received at 9am it will validate and do all the necessary steps, usually within minutes, but then the system waits until 4am before configuring the line. As a result PW orders will not be delivered on the same day as the order is received.

### Other connections

As the volumes of ULMP connections are very low compared to eir Retail variations in the comparative performance between Retail and Wholesale can occur.

# Terminating Segments of Leased Lines (Leased Line Supply) KPIs

---

Table 5

# Table 5: Terminating Segments of Leased Lines (Leased Line Supply) KPIs

- **Leased Lines**

- This refers to all new Wholesale Leased Lines / PPC EULs and eir Retail Leased Lines
- The provisioning is split between Standard (STD), Project (PRJ) and Non-Standard (NSTD) Orders.
- Data orders are validated as Standard or Non-Standard.
- Standard: A circuit which is ordered and all components are available to eir to provide the circuit in the Standard lead times are validated as Standard.
- Non Standard: A circuit which is ordered and there are impediments to eir delivering the order. Orders that are validated as Non Standard are given a forecasted delivery date.
- Some Non Standard orders are designated as Project when eir assigns a project manager to implement them. Project orders include where a customer orders a number of circuits to the same premises or wishes them to be delivered over a set period of time. These orders are assigned a project manager and deemed to be a project. A Due Delivery Date is agreed between the customer and eir for delivery of the orders.

Table 6

# Table 6: Terminating Segments of Leased Lines (NGN Ethernet Supply) KPIs

## NGN Ethernet

This refers to all new Wholesale NGN and eir Retail NGN Leased Lines

The provisioning is split between Standard (STD), Project (PRJ) and Non-Standard (NSTD) Orders.

Data orders are validated as Standard or Non-Standard.

Standard: A circuit which is ordered and all components are available to open eir to provide the circuit in the Standard lead times and are validated as Standard.

Non Standard: A circuit which is ordered and there are impediments to eir delivering the order. Orders that are validated as Non Standard are given a forecasted delivery date.

Some Non Standard orders are designated as Project when open eir assigns a project manager to implement them.
